## Fear of Dentists is of the Past!

Compared to traditional methods and laser technology, dentistry has numerous advantages. Operations are less invasive and nearly painless, so less anesthetic is required; the hemostatic and bactericidal effect of the laser results in minimal bleeding and faster healing; lack of noise and turbine vibrations make the visit to the dentist's studio less unpleasant than before. **Lambda's** Doctor Smile dental lasers fully respect the tissues present in the oral cavity, since they are precise, safe and efficient tools. Lasers can be used to treat much different pathology such as gum care, tooth decay removal, desensitization, whitening, surgery, aesthetics and more.

Doctor Smile offers a full range of laser for hard and soft tissue treatments. Doctor Smile Pluser Erbium laser is an innovative laser for soft and hard tissues. It is a complete and versatile instrument carefully designed to perform a broad range of operations with great efficiency, specifically developed for the dental and dermatological fields.

Doctor Smile Wiser Diode laser is the wireless laser, free from power cables, with or without a pedal, no optical fiber: these are the main novelties of Wiser compared to conventional diode lasers, so one can move freely within the studio without the hassle of tangles between cables.

**Doctor Smile offers a full range of laser for hard and soft tissue treatments**

Doctor Smile Simpler Diode laser is the new dental laser generation in a simple and affordable laser unit. The simpler laser features preset treatments on a color touch screen, built-in navigation, downloadable apps and a complete set of accessories.

Lambda S.p.A. operates within a group of companies that are active in various sectors and share a vision based on the continuous development of technology. The company operates in four sectors, which are articulated in four brands: dental (Doctor Smile), surgery (Doctor Surgery), cosmetic (Doctor Beauty) and cultural heritage (Art Division). ■
