

The Multifunctional Laser

The D30 diode laser is a powerful multidisciplinary tool. Dentistry, dermal surgery, non-surgical aesthetics, hair removal, therapy and cosmetic vascular treatments are finally available in a single unit. The multifunctional MITO handpiece makes the most of the D30's diode laser potential thanks to the interchangeable plug 'n' play terminals. Dental treatments, vascular surgery, wart and fibroma removal, telangiectasies, photo-rejuvenation, therapy, rehabilitation and much more, all at your fingertips!

DENTISTRY: laser treatment of endodontics, periodontics, whitening, surgery, implantology

VASCULAR TREATMENTS: During the laser exposure the vessels are emptied of blood and therefore visibly disappear without any bleaching of the skin. The D30 can treat skin lesions such as angiomas, telangiectasies, spider veins and more.

DERMAL SURGERY: wart and fibroma removal, micro liposculpture.

HAIR REMOVAL: effective hair removal

MITO
Multi Interchangeable Treatment Operator

PHOTOREJUVENATION (non-surgical): The non-ablative laser stimulation of fibroblasts induces a photorejuvenating effect by favouring the progressive filling of wrinkles with collagen.

THERAPY/BIOSTIMULATION: non-invasive painless analgic laser therapy for arthrorheumatic pathology, sport injury rehabilitation, ATM therapy and more...
