### Micro-prep set for minimal invasive preparation

It's the combination of smallest working parts and the slim, long neck construction of the Micro Prep diamond instruments. On smallest access openings they allow working underneath the adamantine layer without unnecessary further opening of the healthy tooth enamel.

The six slender instruments in two grit sizes, combined with the long, narrow necks not only allow optimal visual control during grinding, in the depth of the carious cavity, but also enable the transfer of sufficient cooling liquid and rapid chip clearance. Thus they facilitate the "finest" task, even in those places which are difficult to access.

With slight pressure and a maximum speed of 160,000 rpm, you will experience a new and flexible grinding technique.

The six application-oriented instrument shapes in fine and medium grit are also available as the "Micro Prep Set" on the STERI-SAFE bur stand. The complete set is suitable for all standard disinfecting, cleaning and sterilization procedures.

Additional information as well as the latest research on grinding performance of diamond instruments is available upon request from the manufacturer.

### VistaScan Mini image plate scanner

Dürr Dental – A leader in diagnostics for dental surgeries now offers dentists images with high resolution to meet

all diagnostic demands. More than 40 years experience in the development of X-ray technology leads time and again to practice-oriented and innovative solutions.

The VistaScan Mini image plate scanner makes image plate diagnostics even faster for dentists. The compact device is particularly easy to use and requires a minimum of space – so that it can be installed in the treatment room. The advantage: X-ray and scanning directly at the chairside with full flexibility in the image formats. The reusable VistaScan image plates are read out in top quality within seconds. There has never been a better time to change over to image plates.

### Elegant and innovative - WISER, the wireless laser

Diode lasers are nowadays an essential tool for the modern dental practice. The benefits that both patients and doctors derive from it will quickly pay off the investment: periodontics, implantology, surgery, endodontics, therapy and whitening become faster and less painful procedures.

Doctor smile's WISER laser is compact, elegant and works without cables and pedals: this makes it a very practical tool for a busy dental practice, where every minute counts. This powerful 7 W diode laser recharges in sixty seconds thanks to the patented Super Cap technology. It can then be used for various treatments without the inconvenience of cables, pedals and plugs.

The WISER laser has a finger switch built into the handpiece for greater operating freedom. The handpiece's removable cover can be autoclaved for maximum hygiene. Thanks to the interchangeable tips it is no longer necessary to cut or strip the

fibre. The tips are reusable for many treatments with maximum hygiene.

The colour display shows power, time and mode parameter settings. The intuitive software guides the operator in the selection of the numerous pre-set treatments. The bright touch keyboard is smooth with no outward buttons for easy cleaning and fast selection. The laser includes comprehensive clinical protocols and a video guide on CD.

The WISER laser becomes an even more versatile instrument when combined with the FLAT TOPAB2799 handpiece for antalgic therapy and biostimulation.
