

THE DIODE LASER

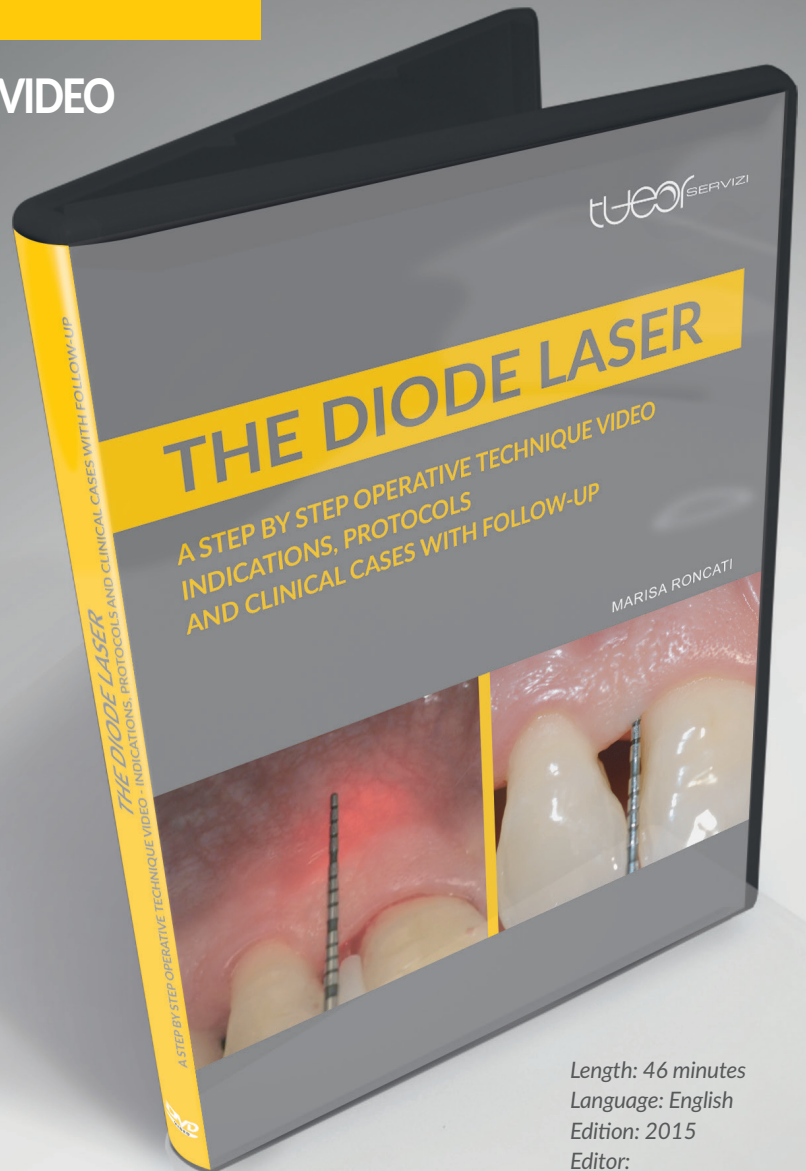

A STEP BY STEP OPERATIVE TECHNIQUE VIDEO INDICATIONS, PROTOCOLS AND CLINICAL CASES WITH FOLLOW-UP

Laser treatment may serve as an alternative or adjunctive treatment to conventional therapy in periodontics, which remains necessary and irreplaceable. It does not replace conventional therapy, but it offers additional benefits, when used with correct protocols and appropriate parameters. The DVD illustrates in detail clinical protocols and comprehensive management of periodontal patients, from the first visit to revaluation, which culminates in periodontal maintenance, to achieve clinical stability, with short and long term follow-up video. Manual and ultrasonic instrumentations, always site-specific, are also fully described with several drawings and animations, highly didactic. The diode laser also presents indications, in case of mucositis and perimplantitis. A Laser Assisted Non Surgical Therapeutic Approach, with 1,7 and 23 year follow-up, is fully illustrated. Herpes Labialis and Ulcerous Aphthae Laser treatments, as well as Laser Assisted Vital Tooth Bleaching are further described.

DVD CHAPTERS

1. CLINICAL STABILITY
2. LASER ASSISTED NONSURGICAL PERIODONTAL TREATMENT
3. SAFETY REGULATIONS
4. DIODE LASER PERIODONTAL TREATMENT PROTOCOL
5. BIOSTIMULATION
6. DIODE LASER - CHARACTERISTIC AND DECONTAMINATION
7. STEP BY STEP OPERATIVE TECHNIQUE
8. GENGIVOPLASTY
9. NON SURGICAL PERIODONTAL TREATMENT PROTOCOLS
10. CHAIR OPERATOR POSITION
11. MUCOSITIS AND PERIMPLANTITIS - LASER ASSISTED NON SURGICAL THERAPEUTIC APPROACH
12. HERPES LABIALIS. LASER TREATMENT
13. ULCEROUS APHTHA. LASER TREATMENT
14. LASER ASSISTED VITAL TOOTH BLEACHING
